

### **School teachers work with LHCb**

Over the last two weeks 37 school teachers from all over the world have been visiting CERN to participate in the High School Teachers program.

During their stay they have been able to attend physics lectures with the summer students, explore the site and experiments, and have had the chance to go down to see the LHCb detector. One of the teachers, Juliana, even wrote a blog about her time at CERN (see <http://julianaatcern.blogspot.com/>)

The group also had the chance to participate in some projects around CERN, and LHCb were lucky enough to have 4 teachers joining us to help us with our outreach work in schools.

We met to discuss possible classroom demonstrations, and their view of what information would be useful for teachers before school groups come to visit. Meeting some of the summer students was particularly interesting for the teachers, as they were all keen to get more of their students studying physics at university and believe students at school need more awareness of what physicists do on a day to day basis.

We would like to thank them all for helping us, and wish them all the best with teaching next years students all about CERN and the LHC.
